Malaysia’s first energy literacy website launched

PUTRAJAYA: The official website for Malaysia Energy Literacy Programme (MELP) – www.melp.my – was launched yesterday as a national energy literacy reference centre that is interactive, easily accessible and resilient, in line with the Madani Malaysia aspirations to create a more energy-literate society.

The Energy Transition and Water Transformation Ministry said the website was launched by Deputy Prime Minister Datuk Seri Fadillah Yusof, who is also the Energy Transition and Water Transformation

minister, at a gathering with the ministry staff here yesterday.

“This website provides various digital reference tools, including articles, guides, infographics, videos and educational content,” it said in a statement.

The ministry said the development of the MELP website was led by the Energy Commission and with the active participation of MELP Strategic Partners.

They are the ministry, Sustainable Energy Development Authority, MyPOWER Malaysia Programme

Office for Power Electricity Reform, Yayasan Hijau Malaysia, Malaysian Green Technology and Climate Change Corporation, Tenaga Nasional Berhad, Malakoff, NUR Power and Edra Energy.

“This initiative is capable of enhancing public understanding on, among others, the importance of energy, efficient use of energy, electrical safety and the role of all parties in supporting the country’s goal of zero carbon by 2050.

“The MELP serves as a bridge of energy-related knowledge for all,

equipping them with authentic and practical information to practise in their daily lives.”

The ministry is committed to strengthening energy literacy efforts through MELP as a vessel for the inclusive sharing of knowledge and awareness.

“With this website, efforts to bring the message of sustainable energy to the people can be intensified, thus supporting the national socio-economic development agenda that is in line with the Madani Malaysia aspirations,” it said. – Bernama
