7700 Road Lights Light Up Pahang

The Pahang state government has embarked on a project to install 7,700 road lights throughout the state, to improve road safety and aesthetics. The project is expected to be completed by the end of the year.

The project,耗资2亿4500万, will be carried out in phases, with the first phase covering about 6,000 locations. The remaining 1,700 locations will be completed in the second phase.

The road lights will be installed along major roads and highways, as well as in residential areas. The government has also taken into consideration the needs of the elderly and disabled, ensuring that the lights are placed at accessible locations.

The project is expected to improve road safety and reduce accidents. The government has also taken steps to ensure that the lights are energy-efficient, reducing the state's carbon footprint.

In addition to improving safety, the road lights will also enhance the state's aesthetics, making it more attractive to visitors and residents alike.

Chairman of Pahang State Executive Council, Dato' Sri Mohd Ahmad Zaharin bin Zainuddin, said the installation of the road lights is a major step towards improving the state's infrastructure.

"This project is part of our efforts to develop Pahang and make it a more livable state," he said.

The project is expected to be completed within the next 12 months, with the first batch of lights to be installed in the coming months.

The government has also taken steps to ensure that the lights are properly maintained, with regular inspections and repairs to be carried out.

The project is estimated to cost RM2.45 billion, with the funds coming from various sources, including state government contributions and private sector investments.

The project is expected to create job opportunities for local residents, with the government calling for bids from local contractors to carry out the work.

"This project will not only improve road safety but also create job opportunities for our people," said the chairman.

The project is part of the state's efforts to improve infrastructure and make Pahang a more attractive destination for visitors and investors.

The chairman said the state government has also taken steps to ensure that the lights are energy-efficient, reducing the state's carbon footprint.

"We are committed to developing Pahang into a green state," he said.

The chairman urged residents to support the project, saying it was a major step towards improving the state's infrastructure and making it a more attractive destination for visitors and investors.

The project is expected to be completed within the next 12 months, with the first batch of lights to be installed in the coming months.
