ELECTRICITY GENERATION

TNB to begin solar project next month

KUALA LUMPUR: Tenaga Nasional Bhd (TNB) will start developing its first large-scale solar project on a 97ha plot in Kuala Langat, Selangor, next month.

TNB said yesterday 68ha would be developed into solar farms while the remaining land would be occupied by a high-

voltage transmission line.

The project will generate and transmit 50 megawatts of electricity to the national grid by November next year.

TNB's wholly-owned TNB Sepang Solar Sdn Bhd was awarded the project through a competitive bidding exercise.
