Renewable energy exports via ENEGEM based on excess supply

KUALA LUMPUR: The implementation of renewable energy (RE) exports through the Energy Exchange Malaysia (ENEGEM) is based on excess electricity from the existing electricity supply system, said the Ministry of Energy Transition and Water Transformation (PETRA).

Its Deputy Minister Akmal Nasrullah Mohd Nasir explained that the sale of RE supply from the electricity supply system was made based on the highest bid tariff offer.

He also said that the energy sales were handled by Tenaga

Nasional Bhd (TNB), which acted as the government's representative in the agreement with the buyer from Singapore.

"All income or trade is for the purpose of enforcing the country's electricity supply system, not for profit," he said in a question and answer session at the Dewan Rakyat yesterday.

Akmal Nasrullah was replying to a supplementary question from Lee Chean Chung (PH-Petaling Jaya) who wanted to know about the status of ENEGEM implementation and future plans. — Bernama
