FITTERS unit commences sales of renewable electricity to TNB

KUALA LUMPUR: FITTERS Diversified Bhd's unit, Future Biomass Gasification Sdn Bhd (FBG), has commenced sales of renewable electricity to Tenaga Nasional Bhd under the renewable energy power purchase agreement signed in 2015.

In a statement yesterday, FITTERS said, FBG has received the nod from the Sustainable Energy Development Authority of Malaysia to commence the feed-in tariff to the national grid for 16 years starting March 31, 2018.

It said up to two megawatts (MW) of renewable electricity would be produced at FITTERS's green palm oil mill in Baling, Kedah, where biogas would be generated from palm oil mill effluent in a biogas capture plant and converted into electricity using highly-efficient biogas engine generators. - Bernama
