MTSSB, TNB Remaco partner to advance power plant reliability, technical competency

MALAKOFF Technical Solutions Sdn Bhd (MTSSB), a wholly owned subsidiary of Malakoff Corp Bhd (Malakoff), exchanged a memorandum of understanding (MOU) with TNB Repair and Maintenance Sdn Bhd (TNB Remaco), a subsidiary of TNB Power Generation Sdn Bhd (TNB Genco), the generation arm of Tenaga Nasional Berhad (TNB), on June 4, 2026.

This partnership is aimed to explore collaboration in maintenance, repair and overhaul (MRO) services for power plants, as well as training and competency development opportunities.

The collaboration will also focus on identifying potential third-party MRO business opportunities, enabling both organisations to leverage their combined expertise and networks beyond their existing operations.

The MOU exchange was held during the Energy Transition Conference 2026 at the Kuala Lumpur Convention Centre by Malakoff's senior VP of the Thermal Division Mohd Kopli Yunus and TNB Remaco MD Ts Abidin Sarjo.

Witnessing the exchange were Deputy Energy Transition and Water Transformation (PETRA) Minister Datuk Seri Abdul Rahman Mohamad; PETRA SG Datuk Seri Mad Zaidi Mohd Karli; Malakoff Group CEO Syahrurizam Samsudin; Malakoff CFO Nazersham Mansor; TNB Senior Chief Network Officer Ir Mahathir Nor Ismail and TNB Genco's MD Datuk Shahrir Abdul Latiff.

Under the MOU, both parties will cooperate in identifying MRO opportunities across power plant fleets and explore training and competency development programmes within their

technical environments. Both parties shall also endeavour to identify and pursue opportunities to extend their collective MRO capabilities and technical expertise to third-party power plant operators, further broadening the commercial scope of the collaboration.

"Reliable power plants are the result of disciplined maintenance, skilled people and continuous improvement. As Malaysia's largest

independent power producer, Malakoff has always taken the long view on asset management and technical excellence – not just for immediate gains.

"This MOU with TNB Remaco is a natural extension of that commitment. Both organisations bring decades of operational experience in the Malaysian power sector and by formalising this collaboration, we are creating a platform to

share knowledge, build capability and raise the bar on how power plants are maintained and operated in this country," Syahrurizam said in a statement.

He added that at the same time, there is real commercial potential in the partnership. By combining the parties' strengths, both MTSSB and TNB Remaco are well-placed to jointly pursue MRO opportunities for third-party power plants,

creating new avenues for growth beyond their existing operations. Syahrurizam also shared that for Malakoff, this partnership directly supports its strategy of optimising the performance of its existing thermal fleet while developing the next generation of skilled engineers and technical professionals who will carry this industry forward.

As electricity demand continues to grow rapidly and plant reliability becomes even more critical to ensure national energy security, he noted that maintaining the highest standards of performance and reliability is a responsibility Malakoff takes seriously.

"Keeping our assets performing at their best and ensuring our people are equipped with the right knowledge and skills is not just good practice, it is fundamental to what we do and who we are.

"We look forward to fostering a meaningful and long-term collaboration with TNB Remaco," he said.

According to Malakoff, it remains focused on strengthening its operational capabilities and delivering consistent performance across its energy and environmental solutions businesses.

Malakoff's commitment to reliable energy supply and sustainable services continues to underpin its contribution to Malaysia's long-term growth, guided by its purpose of 'Enhancing Life, Enriching Communities.' – TMR
