Blackouts at polling centres due to wiring

KUALA LUMPUR: The power disruption experienced by four polling stations on election day last Wednesday was due to internal wiring problems.

In a statement, Tenaga Nasional Berhad said the relevant authorities were able to fix the problem and restore the power supply.

The affected stations include SJK (T) Raja Muda Musa, Pandamaran; SK Pelabuhan Klang and Sekolah Rendah Agama Bandar Melawati, all in Selangor, and SK Taman Bersatu, Alor Setar, in Kedah.

Only four of the 6,000 polling stations had disruption of power but they were all restored within an hour.

TNB, had also mobilised a task force to monitor and ensure that the electricity supply remained stable.

A total of 165 sets of mobile generators were stationed at the vote counting centres, which did not face any power disruption while 240 portable power units were used in certain centres. — Bernama
