Chin Hin receives Feed-in-Tariff certification from SEDA

CHIN Hin Group Bhd was granted Feed-in-Tariff (FiT) certification by the Sustainable Energy Development Authority of Malaysia (SEDA). The integrated building material specialist said the certification will enable the company to generate a stable income stream while opening doors for potential business opportunities. At present, Chin Hin has the electricity production capacity of 1,425 kilowatt per hour (kWh) generated through solar panels. With the award of the SEDA Malaysia approval, it will now be able to increase electricity production capabilities by 1,000kWh to 2,425kWh. For every kWh of electricity generated, Chin Hin will gain a fixed income from tariff generated through exporting and selling to the grid. The company currently holds an existing 21-year agreement whereby Chin Hin will deliver and sell, and Tenaga Nasional Bhd will purchase and accept the metered renewable energy. The total FiT contracts awarded will enable the company to generate up to RM4 million in cash flow per annum as well as strengthen Chin Hin's cashflow stability moving forward.
