RENEWABLE energy and technology sectors are pegged to drive Bursa Malaysia's growth in the year ahead, with government policies, global sustainability trends as well as corporate commitments pushing the sectors forward.

According to the bourse in an interview with The Borneo Post, the renewable energy sector, including solar and wind energy, is poised for expansion in 2025 as Malaysia increases its renewable energy capacity.

This comes as the government's National Energy Transition Roadmap (NETR), along with global sustainability trends and corporate commitments to reducing carbon footprints, will benefit companies involved in solar energy, electric vehicle (EV) infrastructure, and green technology.

"The technology sector is also set to grow significantly, driven by ongoing digital transformation," Bursa Malaysia said during the

promotional efforts in preparation for Visit Malaysia 2026," it added.

Additionally, the increase in foreign participation in high-growth sectors such as technology, renewable energy, and construction will enhance market liquidity and diversification beyond traditional sectors like oil and gas, and banking.

"Government's initiatives to streamline investment processes will further attract foreign capital.

"Additionally, the global emphasis on sustainability will encourage listed companies to adopt better ESG practices, meeting international standards and improving their competitiveness and market appeal."

interview.

"Advancements in digital infrastructure, artificial intelligence (AI) and data analytics will boost the digital economy, attract investments, and create opportunities in tech-driven roles.

"Manufacturing, too, will continue to see upward trajectory, supported by technological advancements and increased demand for Malaysian exports."

Similarly, it pinpointed the financial services sector, including banking, insurance, and fintech, will grow due to technological advancements and increased financial inclusion, with digital banking and investment platforms expected to lead this growth.

Meanwhile, it saw that the tourism and hospitality sector is rebounding as travel restrictions ease, supported by increased domestic and international travel, and government initiatives to promote tourism.

"This sector will benefit significantly from
