Samaiden receives approval for biomass power plant in Johor

PETALING JAYA: A renewable energy (RE) specialist principally involved in engineering, procurement, construction, and commissioning of solar photovoltaic systems and power plants, Samaiden Group Bhd's indirect wholly-owned subsidiary, Samaiden Biomass Energy Sdn Bhd has received the Feed-in Tariff (FIT) approval certificate from the

Sustainable Energy Development Authority Malaysia.

A letter dated Jan 22 authorises Samaiden Biomass Energy to construct and operate a Biomass Power Plant with an installed capacity of 7.0 megawatts (MW).

The plant is set to supply a Net Export Capacity of 6.0 MW to Tenaga Nasional Bhd. This agreement spans

21 years and is scheduled to commence on Jan 22, 2027.

The biomass power plant, destined for Kampung Tanjong Batu 15 in Tangkak, Johor, represents a strategic expansion of Samaiden's RE portfolio.

This new development not only strengthens Samaiden's commitment to sustainable energy production but also aligns with Malaysia's broader

goals for environmental sustainability and energy diversification.

Samaiden group managing director Chow Pui Hee said: "This FIT approval is a testament to our team's dedication and expertise in the RE sector. Our new biomass power plant in Johor is a key component of our strategy to enhance Malaysia's RE capacity. This project not only signifies

our growth but also our contribution to the nation's commitment to a sustainable energy future."

Samaiden continues to lead the way in RE, focusing on innovative solutions that contribute to the nation's energy sustainability and environmental stewardship.

This latest venture is a significant step towards realising these goals.
