## TNB, TM team up on green energy, AI

**KUALA LUMPUR:** Tenaga Nasional Bhd (TNB) and Telekom Malaysia Bhd (TM) have teamed up to advance green energy and smarter, sustainable infrastructure.

Both parties signed a memorandum of understanding (MoU) on March 9 to combine their expertise in line with the National Energy Transition Roadmap and the country's digital transformation goals.

The MoU will focus on sustainable energy solutions, digital

technologies and artificial intelligence (AI) for the benefit of customers.

TNB president and chief executive officer (CEO) Datuk Shamsul Ahmad said the parties are assessing the potential installation of solar photovoltaic systems at up to 150 TM premises annually and to more residential Unifi Home customers.

"Through GSPARX, packages will continue to be enhanced to provide greater value to consumers. The expansion of electric

vehicle charging stations is also being planned," he said.

TM group CEO Amar Huzaimi Md Deris said the collaboration reflects the shared commitment to strengthening the nation's energy and digital ecosystems in a sustainable manner.

"By combining TNB's leadership in renewable energy with TM's strengths in digital infrastructure, connectivity and AI capabilities, I am confident that this partnership will create value for both organisations."
