PTP subscribes to TNB's green energy programme

KUALA LUMPUR: Port of Tanjung Pelepas (PTP), a member of MMC Group, has inked a partnership with Tenaga Nasional Bhd (TNB) to support Malaysia's decarbonisation agenda and enhance sustainability compliance via renewable energy adoption under the Green Electricity Tariff (GET) programme.

Under the strategic partnership, PTP has subscribed to 16,000 blocks under TNB's GET programme, equivalent to 16 gigawatt-hours (GWh) of certified green electricity per month, from May 2026 to December 2027.

PTP said the subscription makes it the largest GET subscriber among Malaysian ports to date, supporting its sustainability efforts and compliance with environmental requirements.

Its chief executive officer (CEO) Mark Hardiman said the initiative will accelerate the port's transition to renewable energy and support its 2030 carbon reduction targets.

"This initiative proves that operational excellence and environmental stewardship are not mutually exclusive, but are the dual engines that will drive PTP's long-term growth and resilience in a changing global landscape," he said in a statement.

Adopting the GET programme will also enable PTP to support the growth of renewable energy generation in Malaysia by powering its terminal operations with cleaner energy sources, he said.

TNB president and CEO Datuk Seri Shamsul Ahmad said the partnership could encourage the wider maritime and logistics sector to embrace the energy transition.

The initiative also supported Malaysia's efforts to achieve net-zero emissions by 2050, in line with the National Energy Transition Roadmap, he said.

"This commitment demonstrates how Malaysia's businesses can play a meaningful role in advancing the nation's energy transition while strengthening the competitiveness of key economic sectors," Shamsul said said. —Bernama
