## Power Purchase Agreement: The Renewable Way to Power Up

The Edge CEO Morning Brief, Malaysia

# Power Purchase Agreement: The Renewable Way to Power Up

You've made the decision to incorporate sustainability into your business or home with solar panels. However, there are options for incorporating solar panels into your home or business other than purchasing them.

This is done through a Solar Power Purchase Agreement (SPPA). The easiest definition of a SPPA is that you agree to allow an energy provider to install solar panels on your property for little to no cost.

### The Benefits

The main advantage is that it provides cheap and cleaner energy without the cost of a traditional setup. It also allows you to buy energy at a lower cost than the standard Tenaga Nasional Berhad (TNB) rate, with the option of exporting excess energy from the solar PV system to the TNB grid.

On top of that initial installation process, the energy provider is also responsible for maintenance and long-term upkeep.

### Is a SPPA suitable for you?

Yes. It avoids the high upfront costs of installing solar panels while providing a quick and cost-effective path to going green. Give us a call today at +6012-4422688 or visit our website [www.raygosolar.com](http://www.raygosolar.com) to find out more.
